Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: The interview began with Mr. Friederich giving a background of lock washers; problems associated with said washers; and how the applicant's invention differs and helps alleviate said problems associated with the discussed lock washers. One of the novel characteristics of the given invention, as stated by the above party, and as agreed by the examiner, appears to be the spring element having a lower hardness than the screw element. The examiner recommended that in response to the most recent office action, Mr. Friederich submit a declaration explaining the criticality of the above feature. Examiner stated that with a proper declaration, denoting the criticality of the above feature, the claim appears to be allowable over the prior art of record .
